

AI readiness, governance and executive adoption roadmap

Moving from demonstrations and hype to a governed investment decision

THE SITUATION

Leadership teams were being presented with AI propositions and proofs of concept, but lacked a consistent way to judge evidence, operating implications, portability, governance and the path from experiment to adoption.

BEST FIT

Best suited to organisations choosing among AI propositions, preparing a first portfolio, reviewing a proof of concept or establishing executive governance before scale-up.

THE INTERVENTION

- Tested the business problem, value case and quality of evidence
- Assessed data, integration, security, privacy and operating-model readiness
- Examined model and cloud portability, governance and human oversight
- Converted technical ambiguity into an executive roadmap and decision gates

EXECUTIVE VALUE

A clearer executive view of what to progress, what to test next and what not to fund yet—paired with proportionate governance and an adoption path grounded in business value.
